```
This protein comprises human TAB1, a novel member of the transforming growth factor-beta receptor signal transduction pathway, which activates TAK-1 kinase activity upon binding. Its manno acid sequence was deduced from a cDNA clone (see AAM26706) has obtained from a kidney library; a variant TAB1 (see AAM26706) has set after than Arg at amino acid position 52. Also claimed are: isolated DNA encoding a protein modified by a substitution deletion and/or addition of 1 or more amino acids of the 504-residue (TAB1 sequence, (2) DNA which can hybridise with the 1560 bp TAB1 nucleic acid sequence; (3) isolated DNA encoding a protein comprising amino acids 21-59 or 437-504 of the S04 TAB1 sequence; (4) DNA encoding a fusion protein comprising an above protein or polypeptide; (5) expression vector comprising an above DNA; and (6) host cell, preferably a mammalian or yeast cell, transformed by the cells with a test compound, and measuring the TAK1 kinase the cells with a test compound, and measuring the TAK1 kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               437 QSPTLTLQSTNTHTQSSSSSSDGGLFRSRPAHGLPPGEDGRVEPYVDFAEFYRLMSVDHG 496

                                                                                                                                                                                                             transforming growth factor. Beta receptor signal transduction pathway, which activates TRK-1 Kinase activity upon binding.

C amino acid sequence was deduced from a cDNA clone (see AAM26107) has contained from a kidney library, a variant TAB1 (see AAM26707) has a rather than Ser at amino acid position 52. Also claimed are: isolated DNA encoding a protein modified by a substitution, delecion and/or addition of 1 or more amino acids of the 504-residue.

TAB1 sequence, (2) DNA which can hybridise with the 1560 bp TAB1 comprising amino acids 21-799 or 437-504 of the 504 TAB1 sequence, (3) isolated DNA encoding a protein comprising amino acids 21-799 or 437-504 of the 504 TAB1 sequence, (4) DNA encoding a fusion protein comprising an above DNC-ein or polypeptide, (5) expression vector comprising an above DNA; and (6) host cell, preferably a mammalian or yeast cell, transformed by the expression vector. Cells expressing TAB1 and TAK1 can be used the cells with a test compound, and measuring the TAK1 kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A method has been developed for screening for substances which inhibit CC the binding of TAKI polypeptide to TABI polypeptide. The method comparises: (a) contacting the polypeptide in the presence of a sample; and (b) detecting the amount of bound polypeptide, in which the sample can be pre-mixed with TAKI or TABI polypeptide first. The transforming CC growth factor (TGF) beta inhibitory substances can be used in drugs for cindications e.g. as TGF-beta signal transmission inhibitors or activators, or extracellular matrix protein production enhancement inhibitors or activators, or anoncyte migration inhibitors or activators, or physiological activity induction inhibitors or activators, or physiological activity induction inhibitors or activators, or precipitation inhibitors or activators, or miniphitors or activators or activators or activators or activators. The present sequence represents human TABI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for screening compounds for inhibition of inflammatory cytokine signal transduction by contacting the sample with TAK1 and its receptor TAB1 and selecting for inhibition of TAK1/TAB1 binding. Also described is a method for screening compounds for inhibition of inflammatory cytokine signal transduction in which the inhibition of TAK1 phosphorylation is selected for and drug compositions for the treatment of inflammatory disorders containing as active component an inflammatory cytokine signal transduction inhibitor. TAK1 is an essential component of the signalling process which results in release of inflammatory cytokines such as interleukin-1 (IL-1), IL-10, tumour necrosis factor (TNP) and IL-6. The methods can be used for the selection of effective antiinflammatory agents. The present reguence represents human TAB-1, which is used in the exemplification of
This sequence represents the human TAB1 protein. The invention relates to a method for screening a the formation of a complex between XIAP and TAB1,
                                                                                                                                                                             Screening a substance which inhibits combination inhibitor of apoptosis protein \,\text{-}\,

inhibitor of apoptosis protein (XIAP), transforming growth factor-beta activated kinase I(TRAI) binding protein I(TABI) and a substance to be tested are contacted with each other and then the presence or formation of a complex between XIAP and TABI is detected. The substance can be used as a drug for extracellular matrix protein production enhancement, cell growth inhibition, monocyte migration, physiologically active substance induction, immunosuppression, and beta-amyloid protein deposition. A substance inhibiting the formation of a complex between TABI and XIAP as well as between XIAP and TGP-beta (Transforming growth factor-beta) type I receptor is useful as a drug.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A method has been developed for screening for substances which inhibit the binding of TAKI polypeptide to TABI polypeptide. The method comprises: (a) contacting the polypeptide in the presence of a sample, and (b) detecting the amount of bound polypeptide, in which the sample can be pre-mixed with TAKI or TABI polypeptide first. The transforming growth factor (TGF)-beta inhibitors substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or extracellular matrix protein production enhancement inhibitors or activators, or cell proliferation prevention inhibitors or activators, or encoded migration inhibitors or physiological activity induction inhibitors or activators, or immunosuppression inhibitors or activators, or activators, or immunosuppression inhibitors or activators, or amyloid beta protein
                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                      1 QSPTLTLQSTNTHTQSSSSSSGGLFRSRPAHSLPPGEDGRVEPYVDFAEFYRLWSVDHG 60

A method has been developed for screening for substances which inhibit the binding of TRAI polypeptide to TABI polypeptide. The method be comprises: (a) contacting the polypeptide in the presence of a sample; and (b) detecting the amount of bound polypeptide, in which the sample; and (b) detecting the amount of bound polypeptide, in which the sample; and be remarked with TAKI or TABI polypeptide first. The transforming growth factor (TGP) beta inhibitory substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or activators, or activators, or activators, or activators, or mitabilitors or activators, or immunosuppression inhibitors or activators, and such substances can also be inhibitors of the TAKI polypeptide function, particularly kinase activators.
                                                                                                                                             .
0
precipitation inhibitors or activators, and such substances can also be inhibitors of the TAK1 polypeptide function, particularly kinase activity. The present sequence represents human TAB1.

                                                                                                                                                                                                                                                                                                                                                                                                      A method has been developed for screening for substances which inhibit the binding of TAKI polypeptide to TABI polypeptide. The method comprises: (a) contacting the polypeptide in the presence of a sample; and (b) detecting the amount of bound polypeptide, in which the sample can be pre-mixed with TAKI or TABI polypeptide first. The transforming growth factor (TGF)-beta inhibitory substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or activators, or extracellular matrix protein production enhancement inhibitors or activators, or cell proliferation prevention inhibitors or activators, or monocyte migration inhibitors or activators, or monocyte migration inhibitors or activators, or

                                                                                                                                                                                                              Region
                                                                                                                                                                                                                                     Region
                                                                                                                                                                                                                                                            Region
                                                                                                                                                       Key
  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences genomic DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The piezent sequence tepterents the numen history piccenn which is claimed in the invention. The invention comprises novel human certained the invention and polypeptides and polymedides and polymedides and polymedides of the invention may be used in the prevention (vaccine), diagnosis and treatment (gene therapy) of diseases associated with inappropriate PSPase expression. The PSPase polymedides of the invention may be used as DNA probes to detect and quantitate the presence of similar nucleic acids in samples. The PSPase polymedides may be used as antigens in the production of antibodies against the PSPase polypeptides and in assays to identify modulators of PSPase expression and activity. The anti-PSPase antibodies and activity. The anti-PSPase antibodies may also be used to down regulate expression and activity, the anti-PSPase antibodies may also be used to down regulate expression and activity. Cantagoniats may also be used to down regulate expression and activity. The anti-PSPase antibodies may also be used to say a diagnostic agents for detecting the presence of PSPase polypeptides in samples. Disorders that can be prevented, diagnosed and/or treaded by the invention are: immune/autoinmune disorders (e.g. Miscott-Aldrich syndrome, Condiak-Higashi syndrome, Hashimoto's thyroiditis and multiple callerative disorders (e.g. lymphoma, lung and intestinal cancers); and contine cardiovascular disorders (e.g. lymphoma, lung and intestinal cancers); and
                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents the human HT4SG64 protein which is claimed in the invention. The invention comprises novel human
Nucleic acids encoding serine/threonine phosphatase polypeptides, useful for preventing, diagnosing and/or treating, e.g. Crohn's disease, lung cancer and Scimitar syndrome -
                                                                                                                                                                                                                                                               Claim 11; Page 323-324; 335pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAU47075
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 12
                            Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelltis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The collections may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

C. specification, but was obtained in electronic format directly from WIPO

polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human are applied and the printed amino acid sequences are this parent did not are an in the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes the human Zmaxl gene and the high bone mass (HBM) gene, which are found on chromosome 11q13.3. The Zmaxl and HBM genes have osteopathic activities. The genes can be used in gene therapy, antiesnse therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoporosis, pager's disease, scleroscosis, osteomalacia and fibrous dysplasia. ABA82038 to ABA82700 and AAG68168 to AAG68193 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  119 SSTGSLPPININTNTSEGATSGLIIPLTISGGSGPRPLNPVTQAPLPPGWEORVD---- 173

This invention describes a novel human polynucleotide (I) which encodes a E3 ubiquitin protein ligase, h-E3 UPL (II). The products of the invention have antiinflammatory, immunosuppressive, neuroprotective, cytosetatic, natiarthritic, immunomodilator, antidiabetic, antiviral and cardiant activity. The products of the invention can also be used for treating patients with disorders mediated by the biological and/or pharmacological activity of h-E3 UPL. The nucleic acid sequences encoding E3 UPL are used cin expression systems as assay for agonists and antagonists for the E3 UPL protein. The E3 UPL protein is used in screening assays to identify blockers and antagonists. They are also used in gene therapy. Specific modulation of biological and/or pharmacological activity of novel h-E3 UPL with administration of a modulator or heterological activity of novel h-E3 UPL with administration of a modulator or heterological activity of novel h-E3 (F or treating physiological conditions like inflammation, autoimmune cit casses, neurological disease, apoptosis, endothelial cell physiology (e.g., proliferation) differentiation, and any also be employed in analysis to map chromosomal location e3, screening tools association with disease markers. They are also used as screening tools

The sequences can also be used to detect the presence of the mRNA transcripts in a patient or to monitor the modulation of transcripts during treatment. This sequence represents the human E3 ubiquitin protein ligase protein described in the method of the invertice.

Submitted(JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: BINDS TO, AND DESTBELLIZES, ORNITHINE DECARBOXYLASE
WHICH IS THEN DEGRADED. ALSO INHIBITS CELLULAR UPTAKE OF
POLYAMINES BY INACTIVATING THE POLYAMINE UPTAKE TRANSPORTER.
-!- MISCELLANBOUS: A RIBOSOMAL FRAMESHIFT OCCURS BETWEEN THE CODON
FOR SER-67 AND ASP-68. AN AUTOREGULATORY MECHANISM ENABLES
MODULATION OF FRAMESHIFTING ACCORDING TO THE CELLULAR
CONCENTRATION OF POLYAMINES.

Indwig M., Burnell J.N.;
"Molecular comparison of carbonic anhydrase from Flaveria species
demonstrating different photosynthetic pathways.";
Plant Mol. Biol. 29:353-365(1995).
-!- FUNCTION: REVESBIBLE HYDRATARITON OF CARBON DIOXIDE.
-!- FUNCTION: REVESBIBLE HYDRATARITON OF CARBON DIOXIDE.
-!- CATALYTIC ACTIVITY: H(2) CO(3) = CO(2) + H(2)O.
-!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-!- DOMAIN: POSSESSES A TRANSIT-LIKE PEPTIDE, BUT IT IS PROPOSED THAT THIS PEPTIDE IS NOT REMOVED AND THAT THEREFORE THE ENZYME STAYS
IN THE CYTOPLASM INSTEAD OF GOING TO THE CHLOROPLAST
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 QSPILILQSTNTHTQSSSSSSDGGLFRSRPAHSLPP-----GEDGRVEPYVDFAEFYR 53

Endocrinol. 3:674-680(1989).

-!- FUNCTION: THIS IS A RECEPTOR FOR THE ANTERIOR PITUITARY HORMONE PROLACTIN, AS WELL AS PLACENTAL LACTOGEN I AND II.

-!- SUBCELLUTAR LOCATION: Type I membrane protein.

-!- ALTERNATIVE PRODUCTS: 3 ISOFORMS; PRL-R1, PRL-R2 AND PRL-R3 (SHOWN HERE), ARE PRODUCED BY ALTERNATIVG.

-!- SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.

-!- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 KGKSBELLSALGCODFPPTSDCE -> LWCSILQLTSLVKI
